

HydraCool PLUS

الشركة الطبية العالمية
Global Medical Co.

Skin Management Platform

the multifunctional HydraCool PLUS offers a variety of treatments and technologies all in one platform!

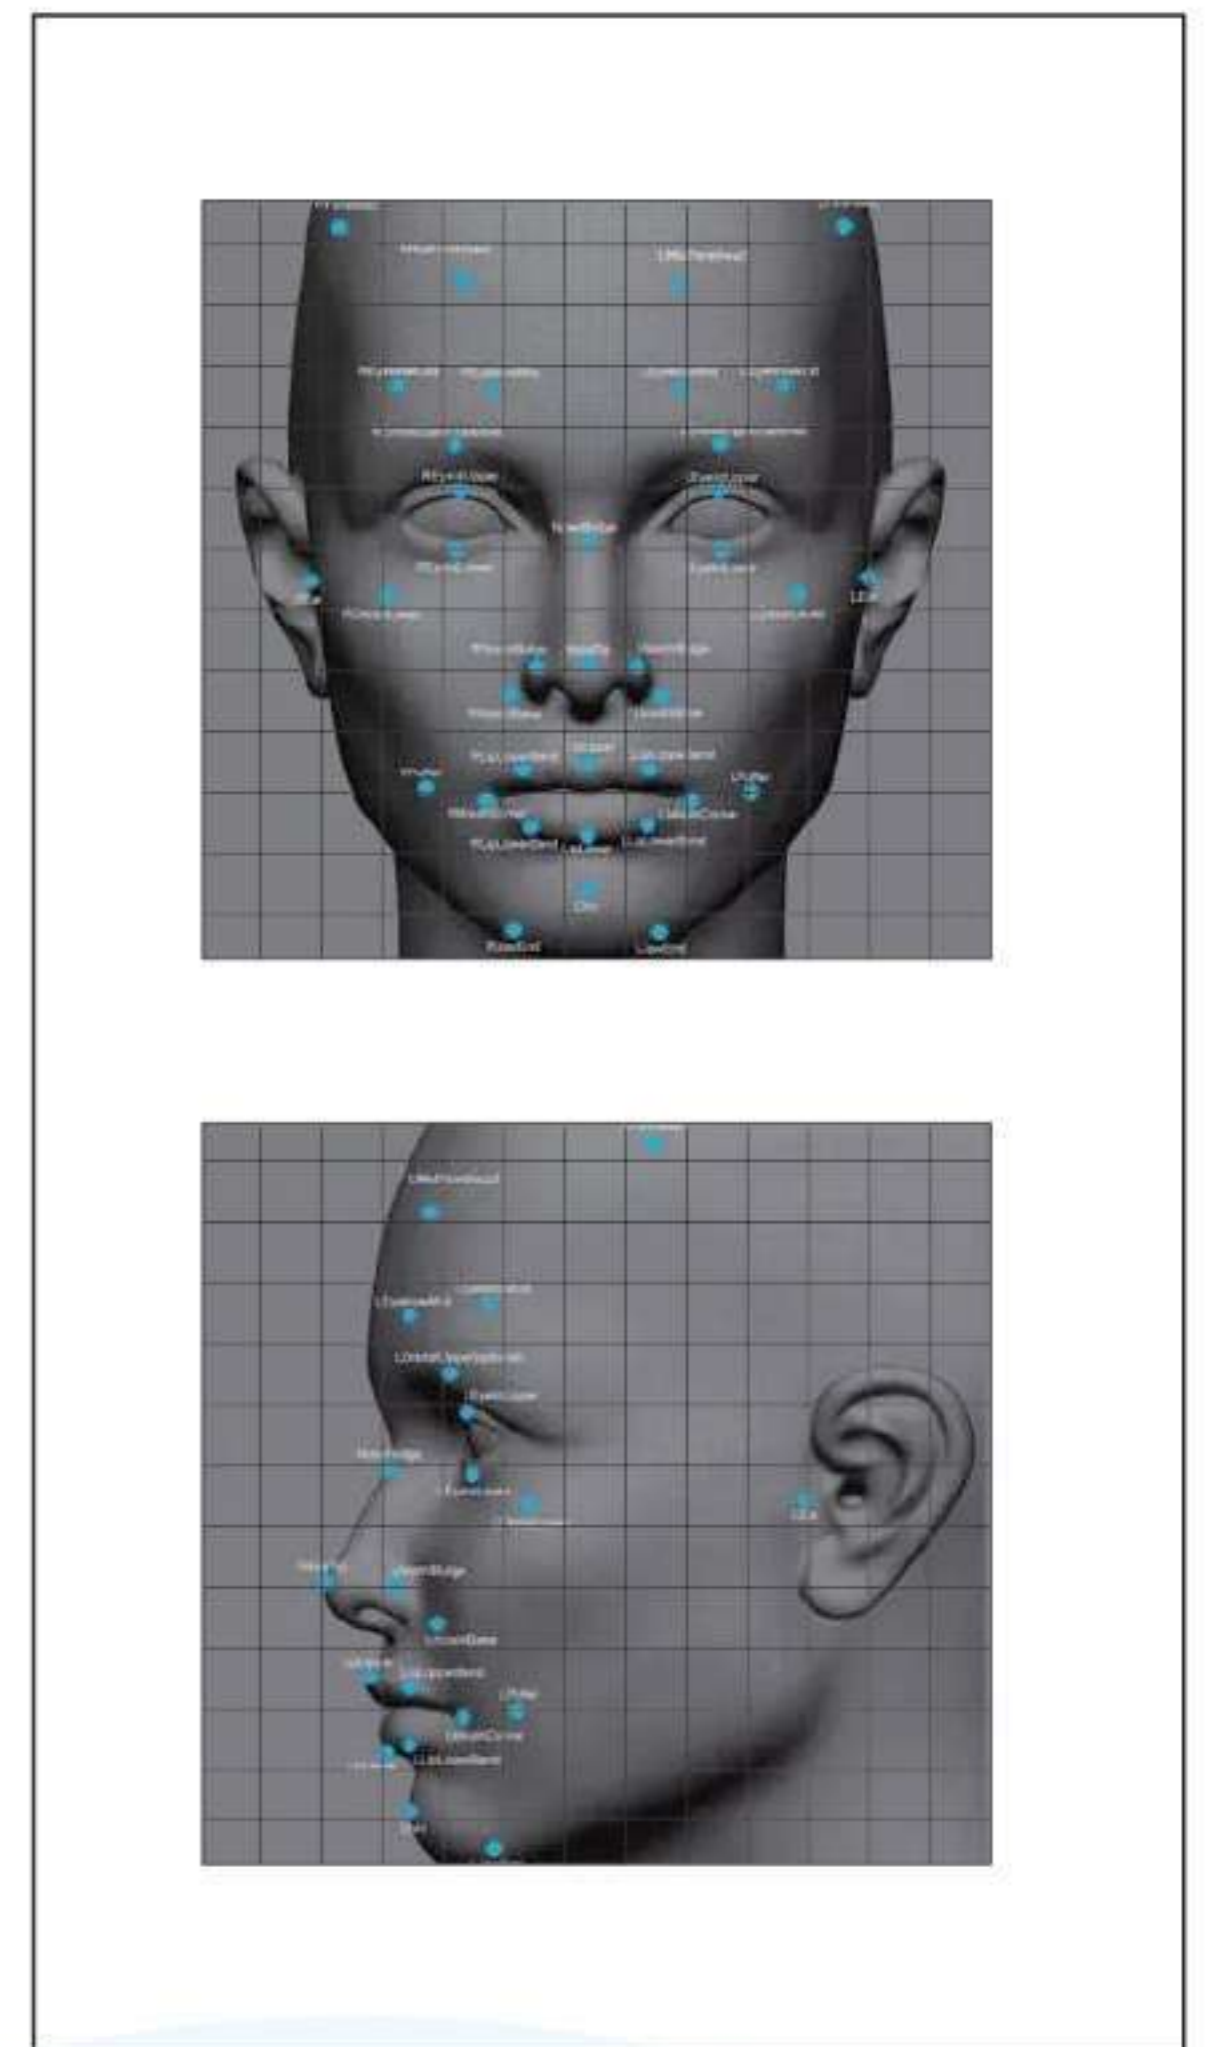

Skin management platform

The new **HydraCool PLUS** platform allows you to create personalized treatments for your patients depending on their skin care demands and needs.

It combines 4 technologies in one platform and can allow your patients to enjoy a tailor-made treatment with lasting results.

- ☑ Safe
- ☑ Efficient
- ☑ Optimized treatment results

Innovative Technologies

A new trend in the beauty industry.

The new **HydraCool PLUS** system combines 4 technologies in one system which provides a more valuable experience for every skin condition.

This combination of technologies makes incomparable results in the beauty skin management sector, improves results usually gained with the traditional skin care creams and provides a comfortable, painless experience for patients during the treatment.

- ☑ AquaB Technology
- ☑ VibroX Technology
- ☑ Collagen+ Technology
- ☑ UltraB Technology

HydraCool
PLUS

Introducing HydraCool Plus 4 TECHNOLOGIES

AquaB Technology

A spiral movement combined with vacuum technology allow water molecules to directly penetrate the skin to pores, which achieves:

- High degree of permeability
- Deep Cleansing
- Balances Water and oil secretion
- Improves skin texture
- Restores natural skin color

VibroX Technology

With specific vibration frequency, this special applicator produces countless CO₂ bubbles which penetrate deep into the skin which triggers the Bohr Effect to enrich Oxygen in blood circulation and revive skin cells leading to:

- Skin Rejuvenation
- Reduction of Wrinkles
- Skin tightening effect

Collagen+ Technology

A key for keeping skin tight and rejuvenated is retaining collagen in the dermis withing a dense net structure. The Radio-Frequency evenly heats collagen up to 37-41°C allowing it to regenerate which results in:

- Restoration of wrinkles
- Improvement of sagging skin
- Skin tissue lifting
- Reversing skin ageing

UltraB Technology

UltraB Applicator outputs 1MHz high-frequency ultrasound which effectively breaks down the molecular structure of skin products into minute molecules which can then easily penetrate cuticle barrier into the skin base layer resulting in:

- Smooth skin texture
- Moisturized skin
- Enriched skin from within

Synergy of 4 Technologies in one platform

  Device available in 2 colors
