GYNECOLOGY

INDIBA® Deep Care supports medical procedures in the genital area, helping to improve self-esteem and confidence quickly and painlessly. Minimizes pain and inflammation, accelerates recovery, moisturizes tissue and improves muscle tone. Power your more intimate health and beauty.

PAIN MANAGEMENT

INDIBA® Deep Care helps to reduce pain and the use of analgesics safely, accelerating the post-treatment and post-surgical recovery process.

FAQs

How does INDIBA® work?

INDIBA® technology promotes the biological response of the tissue, accelerating recovery after a treatment or surgery, reducing pain and producing better rejuvenation, revitalization, lifting and hydration results, among others.

Are the treatments painful?

No, these are painless and very pleasant. The treatments are carried out using two types of capacitive and/or resistive electrodes as needed.

How often can it be applied?

INDIBA® technology is harmless and can be applied with no limit of sessions. Depending on the combination with other treatments, the doctor will prescribe the best procedure for achieving the most satisfactory results.

How many sessions are recommended?

The number of sessions is highly variable. We can predict that for a pre-surgical treatment, one session would be enough, and for a post-surgical one we could achieve results in two to four sessions. In combined treatments, we have a wide range of possibilities, with the doctor and the team determining the ideal number of sessions for your case.

Can I sunbathe before and/or after an INDIBA® treatment?

Yes, there are no contraindications. Nevertheless, in the event of intense sun over-exposure, we recommend restricting the use of high temperatures in the application of INDIBA® for 24-48 hours after sun exposure.

Can I use INDIBA® if I'm receiving other treatments, or if I have fillers, implants, botulinum toxin or threads?

Yes, INDIBA® is compatible with other procedures and can be used in zones with implants, fillers, botulinum toxin, threads, pre- and post-surgery and other medical procedures.
